                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                          9
participates in resistance to homoserine. Amplification of the gene results in an improvement of the amino acid productivity of E. coli. The invention provides: the RALB protein (see AAY7929), DNA encoding the RALB, especially nucleotides 557-1171 of the present sequence; a bacterium, especially of the genus Escherichia, in which L-homoserine resistence is enhanced by amplifying the copy number or increasing the expression rate of the rht B DNA, the DNA being carried on a multicopy vector or on a transposon; and a method for producing an amino acid by cultivating the bacterium in a culture medium to produce and accumulate the amino acid in the medium, from which it is recovered. The method is used for the production of L-homoserine, L-alanine, L-isoleucine, L-valuine, L-alanine, L-isoleucine, L-

at a concentration at which the corresponding wild-type strain would grow. Since the transformed bacteria can grow on the minimal medium can synthesise L-homoserine, which accumulates. The accumulated amin acids can then be removed from the culture medium. The bacterium of present invention may also be used to synthesise L-threonine, L-vail and L-leucine at increased levels

(HYSE-) HYSEQ INC.	<pre>f, Liu C, Tang YT; 639362/73. 9029208.</pre>	New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.	Claim 1; SEQ ID NO 29199; 103pp; English.	The invention relates to isolated polynucleotide (I) and polypeptide (II) consequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, cond in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consequence.	activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food enrolled management (II) and its binding partners are useful in medical imaging	Supplement. (1) and (1). (1) and (1) are useful for treating disorders of sites expressing (1). (1) and (1) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations

responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at electronic format directly from WIPO at the printed products.
                                                                                                                                                                                                                                                                                                     9

novel human diagnostic protein #25219 standard; cDNA; 2216 encoding 13-FEB-2002 AAS89415 AAS89415 RESULT 4 AAS89415/ DNA 

(first entry)

Human, chromosome mapping; gene mapping; gene therapy, forensic, food supplement; medical imaging; diagnostic; genetic disorder; ss.

Homo sapiens

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (Por) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) as useful in gene therapy techniques to restore normal activity of (II) and to to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polymucleotide sequences have applications in diagnostic forgenetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and canno acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this partner did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the wind the printed specification, but was obtained in the printed specification. New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess Sequence 2216 BP; 518 A; 562 C; 639 G; 497 T; 0 U; 0 Other; Claim 1; SEQ ID NO 25219; 103pp; English. ```
cc encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated pulypeptide or its fragment whose expression is inhibited by the attisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene. In an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (10) manufacturing an antibiotic; (10) profiling a procedure is overexpressed or underexpressed; (10) profiling in which the gene product is overexpressed or underexpressed; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (11) a culture or collection of strains; or (13) identifying the target of a compound that inhibits the compliferation of an organism. The antisense uncleic acids required for proliferation no roganism. The antisense uncleic acids and standing alsoovery programs, or for screening homologous mucleic acids required for proliferation in cells other than S, aureus, S. typhimurium, K. preumoniae or P. aeruginosa. The present sequence is one of the target prokeding procedure specification, but was obtained in not form part of the printed specification, but was obtained in the compart of the printed from the compart of the printed specification, but was obtained in the compart of the printed specification, but was obtained in the compart of the printed specification, but was obtained in the compart of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TGACGCCAGAAATCAGTCAGGGGTCCCATGGTAAAAGCAGCAAACGCGTTTTCTCTTGTT 420

                                                                                                                                     1699
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid comprising any one of
the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid

AAHB4373 to AAHB4499 represent Escherichia coli growth and proliferation related DNA sequences (I). AAHB4500 to AAHB4570 encode the E coli growth and proliferation related proteins given in AAG99079 and AAG9830 to and proliferation related proteins given in AAG99079 and AAG98830 to not make the generation of new and for identification of compounds which interact with the gene products of (I). In addition the expression of (I) and the purification of the proteins, the purified proteins can be used to generate reagents and screen small molecule libraries or chier candidate compound libraries for compounds that can be further developed to yield novel antimicrobial compounds. In addition, nucleic acid probes complementary to (I) that are specific for particular species of microorganisms can be used to identify particular microorganisms species in clinical specimens, therefore, providing a rapid and dependable method by which to identify the causative agents of a bacterial infection. Also, antibodies generated against proteins iranslated from mRNA transcribed from proliferation-required sequences can also be used to screen for specific microorganisms that produce such proteins in a species specific microorganism that produce such proteins in a species specific manner. AAH84501 entended sequencing primers used in the isolation of E. coli growth and proliferation related sequence, which are isolation of E. coli growth and proliferation related sequence, which are Novel nucleic acids that inhibit Escherichia coli proliferation, useful for screening for homologous genes and for designing expression vectors. E. coli growth and proliferation related coding sequence SEQ ID NO:274. Escherichia coli, growth, proliferation, microbial, antimicrobial, bacterial infection, microorganism, ds. The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense mucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide for its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of the appen product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation of an identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) prolifing a companiant actoring the extent product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of GCTCAACGGATTGCTCTATGGATTAAAGGACCAAAGCAGATGAAGGCGCTGAATAAGATT 11177 301 GCTCAACGGATTGCTCTATGGATTAAAGGACCAAAGCAGATGAAGGAGGCGCTGAATAAGATT 360 GIGCTCGGCGTCACCACCACTATTGTGGTCGATATTATTGTGATGATCGGTTACGCCACCCTT 300 TICGGCTCGTTGTTTATGCTGGTGGGAGCGCTTAGCATCGGCGAGGCATGCGTGA 1174 ricescricerranderesassassas 417 Zyskind JW; Xu HH; New antisense nucleic acids, useful for identifying proteins or scre for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than 8. aureus, 8. typhimurium, 8. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence is one of the target not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GCTCAACGGATTGCTCTATGGATTAAAGGACCAAAGCAGATGAAGGCGCTGAATAAGATT 1117

The 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense mucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a cellular proliferation or the proliferation or the biological pathway in which a proliferation, required for the proliferation or the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collineration of an organism. The antisense nucleic acids required for callular proliferation or soreening for homologous mucleic acids required for callular proliferation to solate candidate molecules for actional
                                                                                                                                                                                                                                                                                                                New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 674
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumonniae or P. aeruqinosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wip. Authority from WIPO at the print of the print

```

The invention relates to an isolated nucleic acid comprising any one of the 6213 antiesnse sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the

Claim 14; SEQ ID NO 23973; 1766pp; English

antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of required for proliferation, or that inhibits reliular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overaxpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the compliferation of an organism. The antisense mucleic acids required for proliferation no isolate candidate molecules for rational dangiasovery programs, or for screening homologous mucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, cequired for proliferation in cells other than S. aureus, S. typhimurium, conform part of the printed specification, but was obtained in celectronic format directly from WIPO at the wipo.int/pub/published\_pot\_sequences 1033 GTGATGATCGGTTACGCCACCCTTGCTCAACGGATTGCTCTATGGATTAAAGGACCAAAG 1093 CAGATGAAGGCGCTGAATAAGATTTTCGGCTCGTTGTTTATGCTGGTGGGAGCGCTTTA 1153 7 180 480 540 733 793 eccraccidarcidecineegrarccaecaaredeceeceecaecaeceaceaceaccidaar 300 913 360 973 900 674 120 crosscacrerererecescresiserssecresserres de 140 en casa de la constanta de 150 en constanta de 150 en constanta 853 9 GITGGGACGCTATITICCCGCTCAGTGATTGCGTTTGAAGTGTTGAAGTGGAGCAGGCGCG ACCAATCCCAAAAGTATTGTGTTTTCTGGCGGCGCTATTTCCCGCAATTCATCATGCCGCAA derricedeadedarrakraceardaceacerecarraaceacedearacedededede GCGTCTATTGCTGGGCTTCAGACCGGACTGGCGATTCATATTGTGCTGGTTGGCG-TGGG TOGCTGGCCTCTACTCAATCGCGTCGACATTTGTTCCAGCGCGCAGTTTTTGTGAATCTC 301 Acecneeceaageceaacececacacececaaacrerriccaececececerriceraarcre CAGCCGCAACTGATGCAGTATATCGTGGTCGGCGTCACCACTATTGTGGTCGATATTATT greatgatrogerateceaecereececeaececarirrececaresareaaeseceaae cagaridaadeccuridaacaaaarcrirrigaricacricrirrahdecrigiridecedecedecric Areaccarreacrecrecerrecerrecrecerecrecerecarraitere GGCTCTGGTGCAATCACACTATGACCACCTCGCTCAACCACGGTTA--TCCGGCCGGTG GCTTACTTGATTTGGCTGGGAATCCAGCAGTGGCGCGCTGGTGCAATTGACCTTAAA 557 ATGACCTTAGAATGGTGGTTTGCCTACCTGCTGACATCGATCATTTAACGCTGTCGCCA Gaps 3, Length 618; Sequence 618 BP; 108 A; 182 C; 179 G; 149 T; 0 U; 0 Other; Indels Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated polypeptide for its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that as an activity against a biological pathway proliferation, or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required for cellular proliferation or the test compound that inhibits spendic and an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underspressed (12) determining the extent or organism acts; (9) manufacturing an antibiotic; (10) profiling or compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underspressed of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhmurium, required for proliferation in cells other than S. aureus, S. typhmurium, required for proliferation in cells other than sequence is one of the target one of the present sequence is one of the target one of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid of a permoter operably linked to the nucleic acid of a permoter operably linked to the nucleic acid of a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or the fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (6) pathway in which a proliferation. required gene or tits gene product lies or a gene on which the test compound that inhibits proliferation of an organism acis; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense mucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumonlae or P. aeruginnosa. The present sequence is one of the target of proliferation in cells other than S. aureus, S. typhimurium or term part of the printed specification, but was obtained in the printed for the printed specification, but was obtained in the printed specificati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            557 ATGACCTTAGAATGGTGGTTTGCCTACCTGACATCGATCATTTTAACGCTGTCGCCA 616

임 ò a ð Q ACA51727 standard; DNA; 1017 BP

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a call. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or the fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts of sectivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the strains in changes mucleic acids are useful for strains; or (13) identifying the strains in maintenance or solutions. The articular proliferation to isolate candidate molecules for rational days dascovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. autounds or P. aeruginosa. The present sequence data for this patent did not form part of the printed specification, but was obtained in cell or proliferation in cells one of the sequences of the wipo int/pub/published\_pot\_egences.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(I) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide for its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding compound that inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway. It is a proliferation, or that inhibits cellular proliferation of the gene product or that has an activity against a biological pathway. It which the test compound that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a path which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture comprising strains in which he capt or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful additional and scallular proliferation of partners or product and organism. The antisense mucleic acids required for the procession of an organism. The antisense mucleic acids required and a program or for graneaning homologous mucleic acids required and a procession of an antisense and dead are useful and a procession of an antisense and dead are an engine and an organism. drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published\_pot\_sequences 40 Zyskind Xu HH; New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (III). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed centivity of is useful in gene therapy techniques to restore normal extivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for generate or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this partner the printed specification, but was obtained in electronic format directly from WIPO at the equences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

the 6213 antisense sequences given in the specification where expression of the 6213 antisense sequences given in the specification where expression of the 6213 antisense sequences given in the specification where expression controlled are:

(1) a vector comprising a promoter operably linked to the nucleic acid choose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of required for proliferation, (7) identifying a compound that influences the product lies of a gene product or that has an activity against a biological pathway required for that has an activity against a biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts, (9) manufacturing an antibiotic; (10) profilling a compound, a activity; (11) a culture comprising strains in which the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids required contiferation of an organism. The antisense nucleic acids required contiferation of an organism or capable or actional contains and account or accompany or the compound that inhibits the proliferation of an organism or capable and antisense nucleic acids required for informant and accounted for retional contains and accounted for informant and accounted for retional and accounted for capable and antisense and accounted for retional and accounted to several and an organism are accounted to a compound accounted for a compound accounted for a compound accounted for a compound accounted for a formation of an organism accounted and an organism accounted accounted for a compound accounted for a formation and accounted for a compound acco drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published\_pot\_sequences invention relates to an isolated nucleic acid comprising any Sequence 990 BP; 187 A; 266 C; 309 G; 228 T; 0 U; 0 Other;

Sequence 895. Application US/09489039A

Sequence 805. Application US/09489039A

Patent No. 661083

Patent No. 661083

Patent No. 661083

APPLICANT GATY Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: NUMBER: US/09/489,039A

TITLE OF EXPERIENCE: 2709.2004001

CURRENT APPLICATION NUMBER: US/09/489,039A

CURRENT PILING DATE: 1999-01-27

PRIOR PILING DATE: 1999-01-29

PRIOR FILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 895

LEMBOTH: 645 5 Gaps Length 645; Indels Score 391.8; DB 4; Pred. No. 8.9e-120; 0; Mismatches 142; TYPE: DNA ORGANISM: Klebsiella pneumoniae Query Match 32.6%; Best Local Similarity 77.5%; Matches 500; Conservative US-09-489-039A-895

Patent NO. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27

APPLICANT: Gary L. Breton et al.

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANII FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC99-03PA

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 777
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         986 AIGCAGTATATCGTGCTCGGCGTCACCACTATTGTGGTCGATATTATTGTGATGATCGGT 1045
